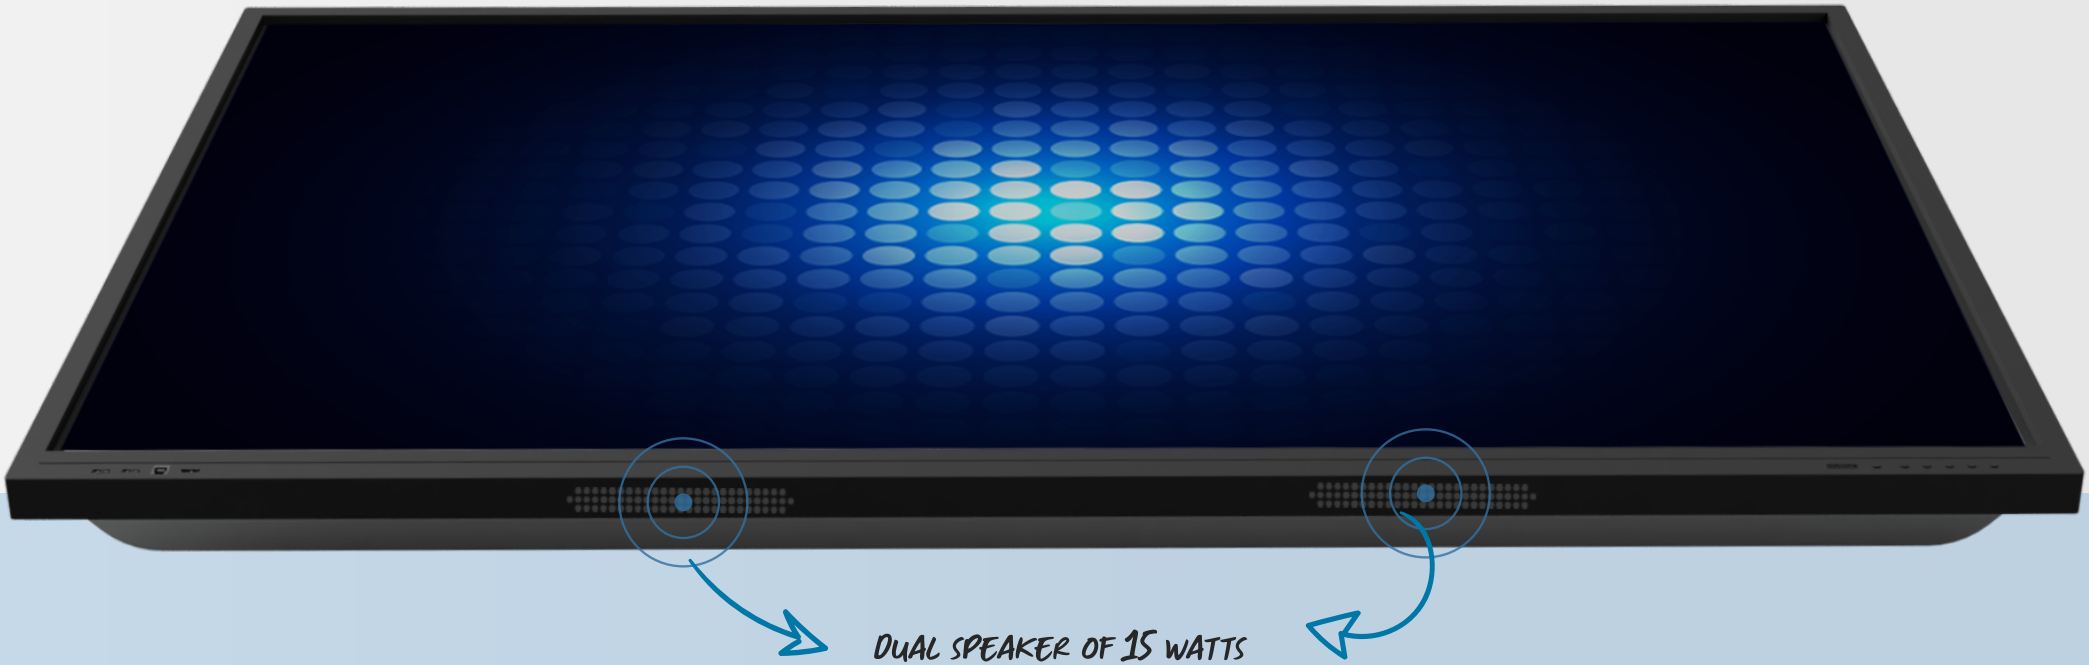
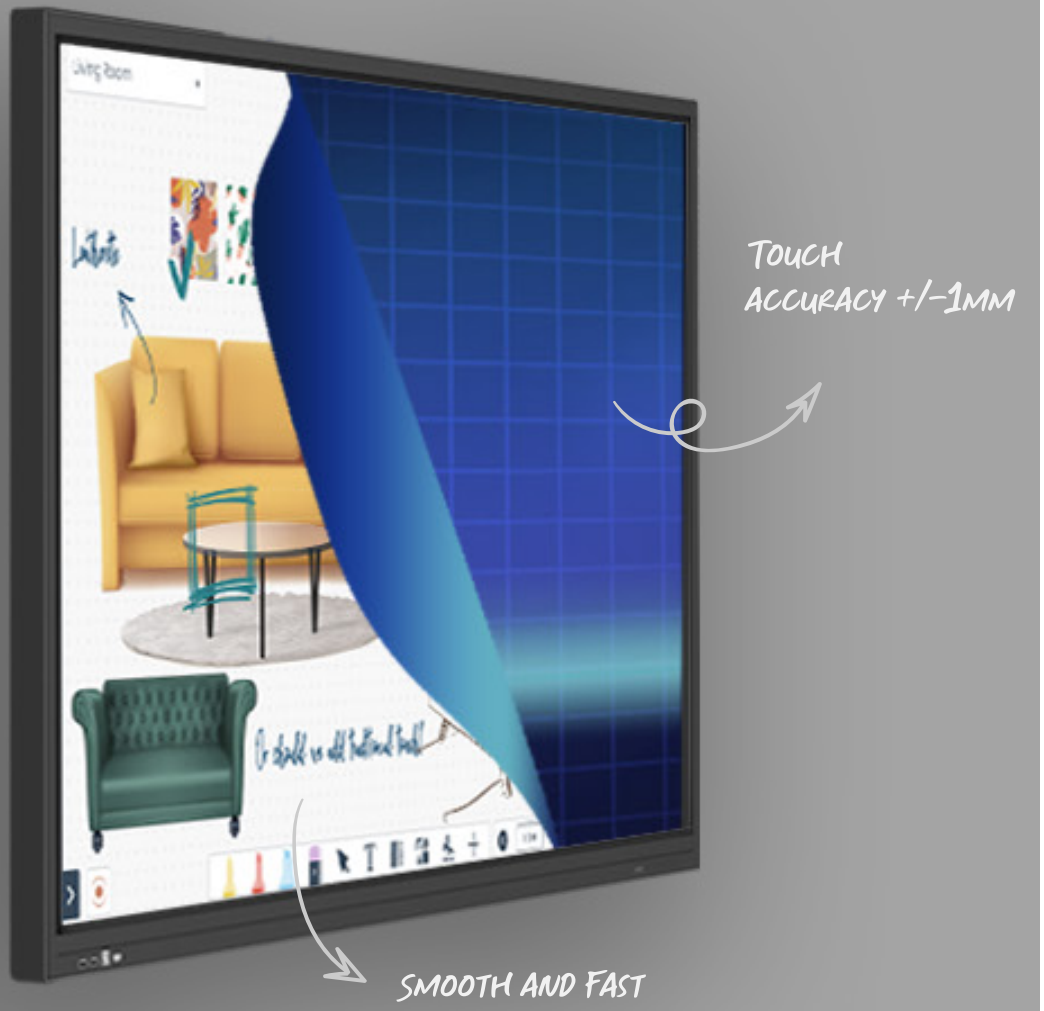
Bright
and Shine

Whether you are conducting a meeting in an open space or in solarium, Quriosity adjusts the brightness of the display as per environment and presents all the brilliant ideas on a bright and high-resolution display, full of intensely saturated colours with superbly contrasting fonts, making it more impactful.



Built-in Speakers

Want to play a video or conduct a video call with remote teams, the built-in speakers in the panel amplify the sound and present it with the utmost clarity. The panel has bottom firing 15 watts Stereo Speakers, producing loud and clear sound.



Ultra- Smooth Writing

Advance Ultra Light Wave Technology, ensures there is almost zero pre-activation, giving very accurate, precise and smooth writing experience. Using Ultra Light Wave Technology, Quriosity delivers the highest touch precision writing experience on the digital canvas, with touch accuracy of +/-1mm. It comes with a thin nib passive stylus that allows users to write and draw in the pixel perfect precision, ensuring zero lag.

Gesture Control

Gestures elicit touch interaction directly with the panel, and enhance the user experience to manipulate the on-screen activities, navigate, or erase directly from the hand.

Quickest to Set Up

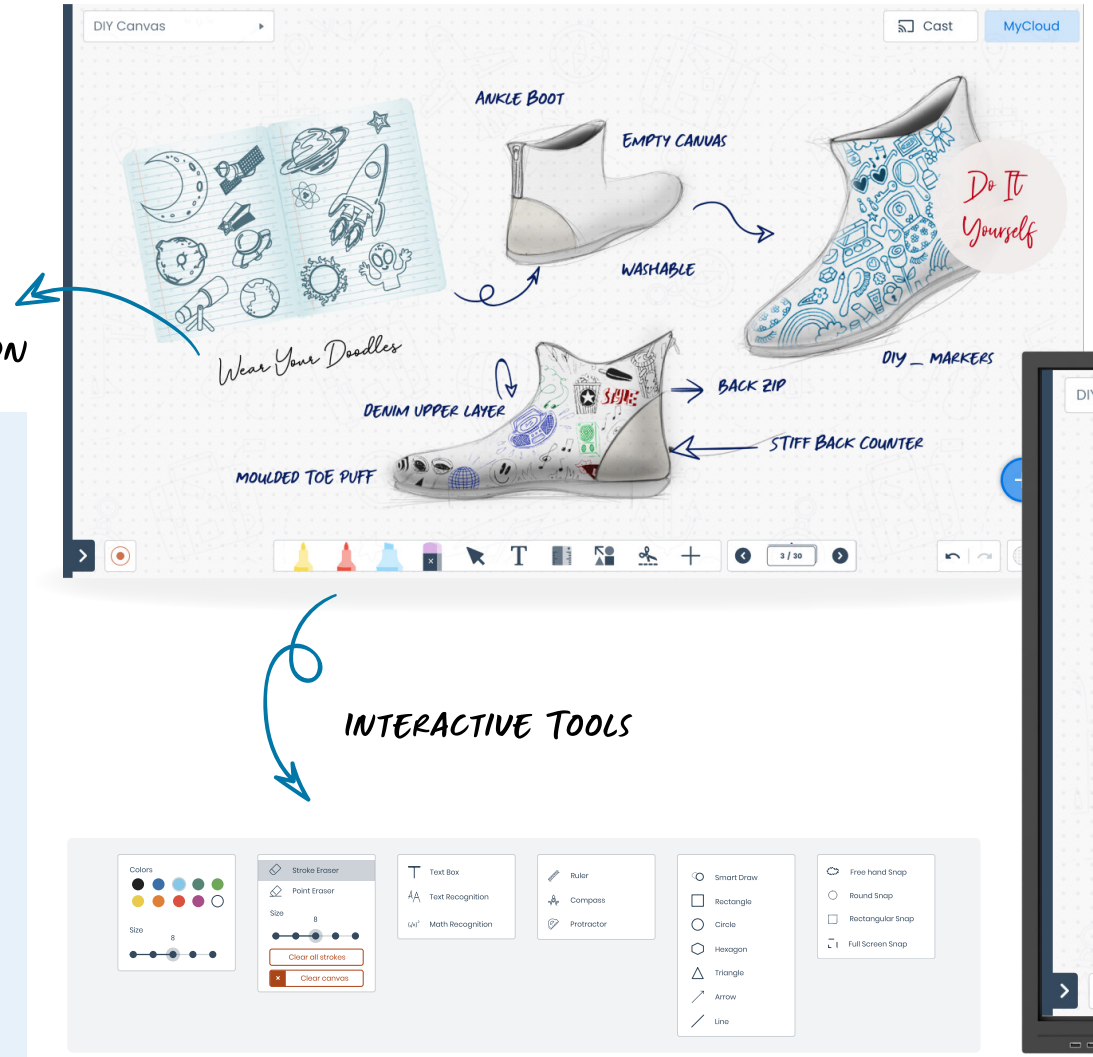
Unbox the device, plug-in, and it's ready to use. That's all. Forget the struggle of choosing the right cable, connecting various devices, to set up a perfect meeting room. Quriosity ensures every meeting is perfect and productive.

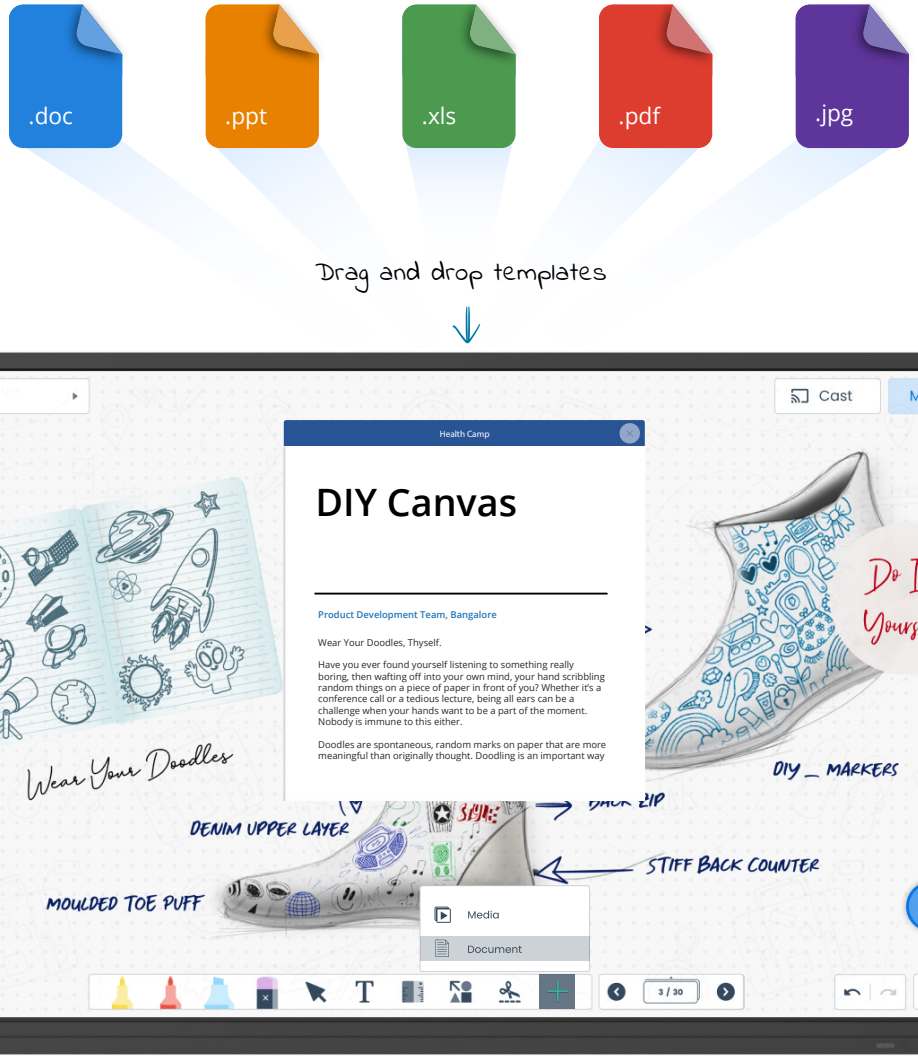
Layers of **Protection**

Designed to address all the safety needs of panel, the device is protected with a toughened glass that makes it robust enough to withstand scratches and adjust under different variations of temperature. The slim frame display around the panel enhances the look.

Ideation and Brainstorming

Infuse your meeting with your knowledge and creativity to foster engagement using smart tools, which assist you to write and annotate in different hues, draw perfect shapes, reads your handwriting and convert into digital text, and allows replaying of the pages infinite times. Achieve more in less time.





Compatibility and Support

Quriosity supports any web browser, compatible with all office applications and support all formats. It allows you to cast the screens of PC / laptop, tablet or mobile with no physical connection.

WIRELESS SCREEN CAST

Contribute **Together** Achieve **Better**

Participate without any wait. To promote active participation in group dynamics, Quriosity allows multitouch interactions on the display simultaneously, enabling participants to quickly add their inputs. Write or draw using passive stylus or finger, or both.

Multitude of choices to share content and ideas :

Share the data or mirror your screen on the bigger display. Compatible with Windows®, Android™, macOS® and iOS, Companion app lets you share almost any form of content – word, presentation, spreadsheets with just a tap on the digital canvas. Or you can connect your Windows® PC & Mac® through USB and control it with touchback functionality. Another option is screen mirroring technology through which participants can wirelessly cast presentations, excel sheets, videos or any other form of content directly from their devices onto the collaborative canvas.

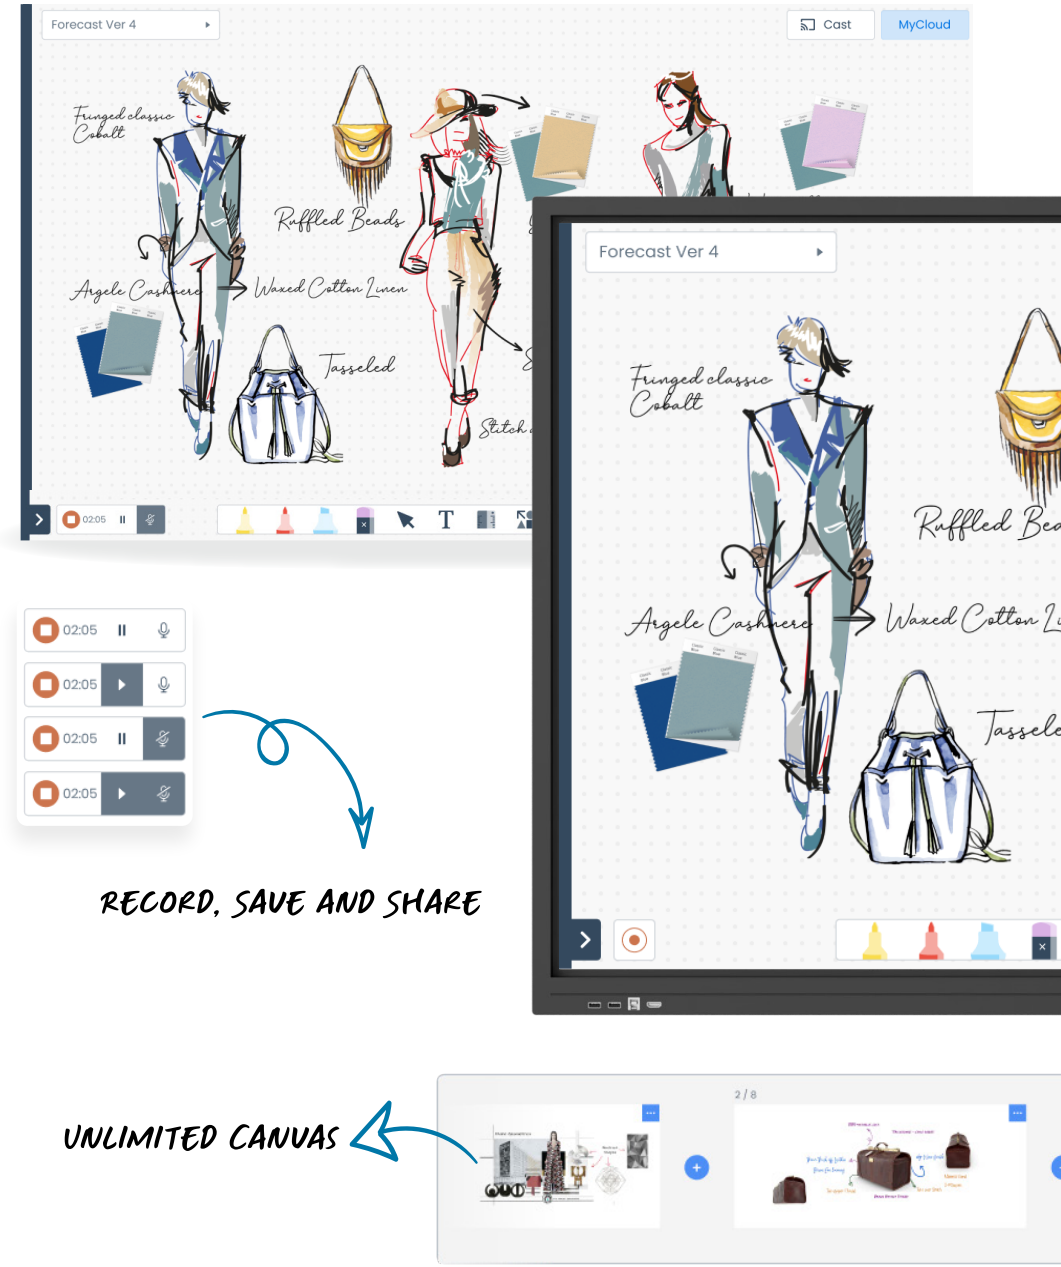
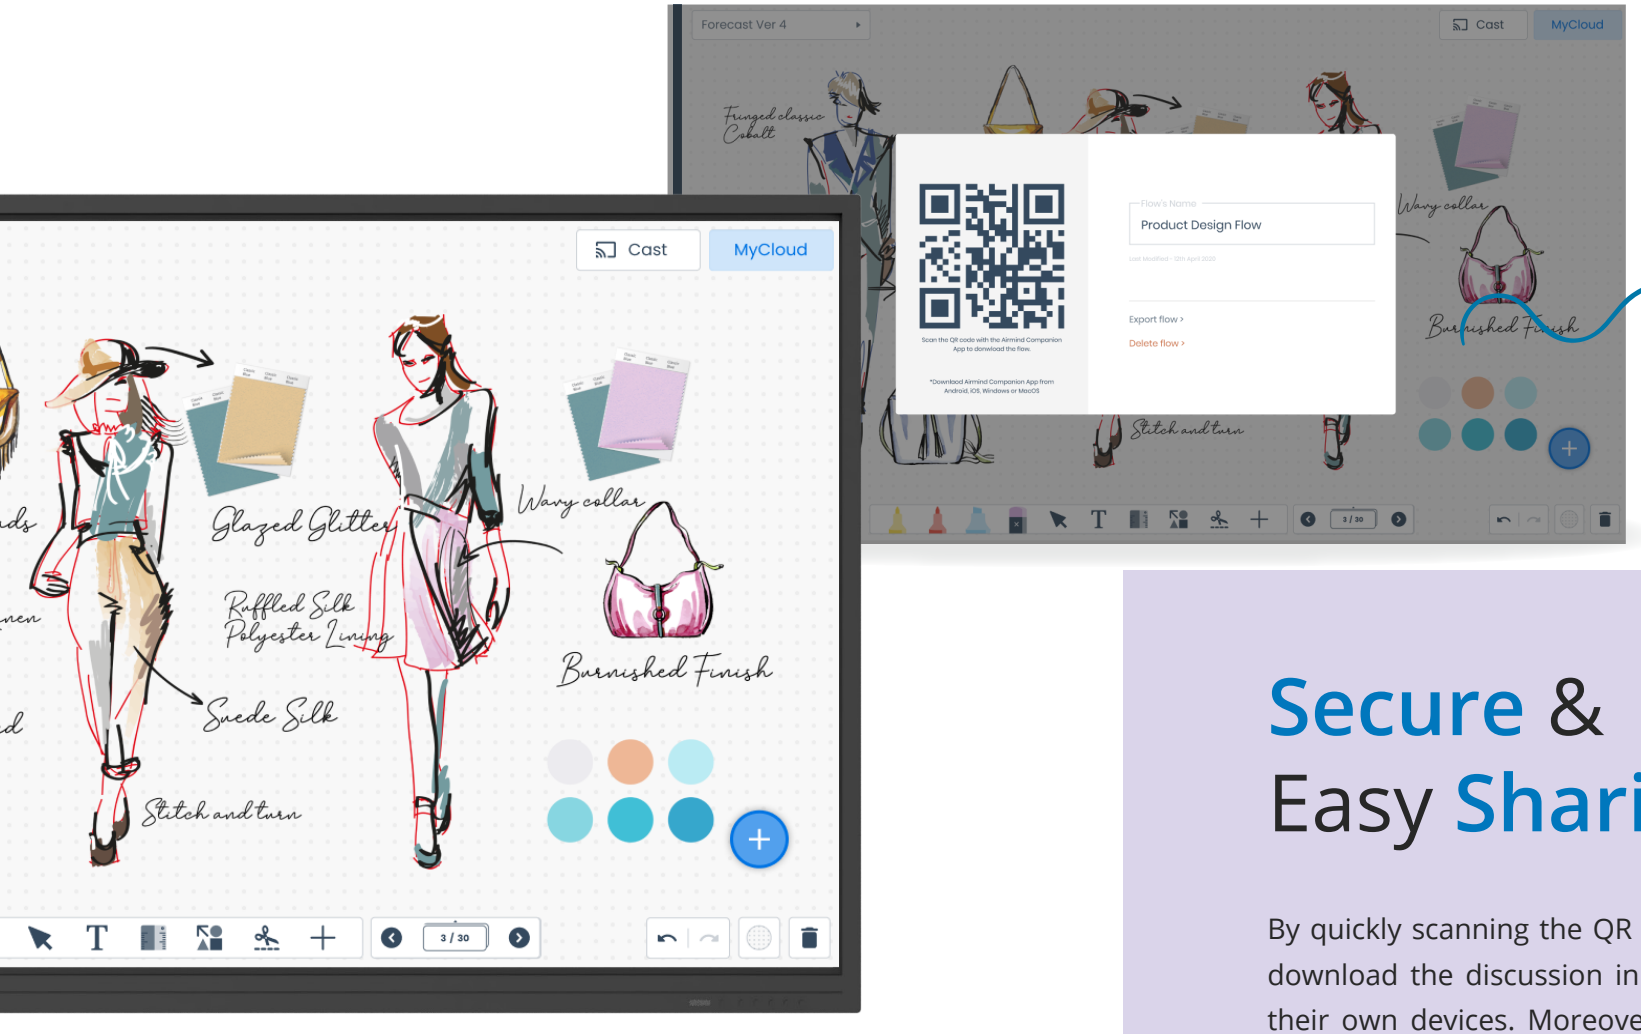
Record Meetings

Don’t worry about documenting meetings anymore. Quriosity lets you record audio and video sessions. Participants can also print the screen, saving time and preventing ideas from being erased or lost forever.

Pages for Unlimited Ideas

Explore different variations of an idea allowing multiple voices in your team on the unlimited pages of the digital canvas, without any fear of running out of space or losing the content. Moreover, you can keep a track of discussion during the meeting.





SCAN AND SHARE THE DISCUSION IN PDF FORMAT

Secure & Easy Sharing

By quickly scanning the QR Code, users will be able to download the discussion in the form of a PDF file on their own devices. Moreover, remote participants can use Global access code to download the discussion. All the shared files are end-to-end encrypted, using secure AES 128 bit & 256 bit level encryption policy.

Video Conferencing

Thinker View* with in-built 1080p camera and ultra-wide-angle delivers an immersive video in the meeting room, marking everyone's presence, irrespective of size of the meeting room. The beamforming mic array has Voice Activity Detection (VAD) and Direction of Arrival (DOA) feature that captures the voice from still or moving sources by focusing directly on the speaker while suppresses the background noise with full-duplex Acoustic Echo Cancellation (AEC).

CYBERNETYX

Transform any Meeting Space

The all-in-one panel comes fitted with all the essential components of modern meeting space, infused with all the high-end technologies. Regardless of industry, work environment, and size of meeting room, Quriosity accommodates every need of different teams.

For unlimited Planning and Scheduling

For teams working on multiple projects and assignments, Quriosity gives more freedom to sync up and plan their priorities. Participants can write simultaneously, and open their favorite project management tools like Trello, Jira etc to streamline their tasks and status.

For unlimited creativity

Whether you are designing a stunning layout for a world popular magazine or illustrating an outfit for your own fashion show, Quriosity empowers every profession to express themselves creatively, with great ease. Sketch your imaginations, communicate different tones of the story in unique style, font, and size. Quriosity has all the tools and enough storage to craft your creative ideas and share them with others.

For unlimited brainstorming

For businesses where multiple stakeholders contribute and collectively take a decision, Quriosity offers unlimited pages to brainstorm, ideate, and automatically saves it to take it up again, without any hassle. To keep everyone on the same page, the entire session can be saved in PDF format and shared quickly.

About Cybernetyx

Cybernetyx is a pioneer and leader in developing Perceptual AI devices that augment our learning and thinking spaces to transform our knowledge work. In 2009, we invented EyeRIS® vision technology - that allowed machines to 'see' and understand human touch and gestures on large surfaces, and now powers products from nearly all of the leading display companies in the world such as NEC, ViewSonic, and others.
